

MDSCO² Carbon Currency

The MDSCO² carbon currency is an innovative way to encourage companies and individuals to reduce the emission of greenhouse gases.

Marcelo Da Silva

How the System Works

Emission Compensation of CO²

Companies and individuals calculate their CO² emission and buy MDSCO² carbon coins equivalent to your footprint carbon.

Exchange and Commerce

Carbon currency can be negotiated and exchanged between companies and individuals, creating a more carbon market efficient.

Investment in Projects of Sustainability

The funds raised with the sale of carbon coins are invested in projects sustainability that help to reduce the emission of CO² in the atmosphere.

Who Can Participate

Companies

All companies, regardless of size or sector, can participate and benefit of the currency system MDSCO² carbon.

Individuals

anyone who want to contribute to CO² emission reduction can join the initiative and use carbon currency.

governments

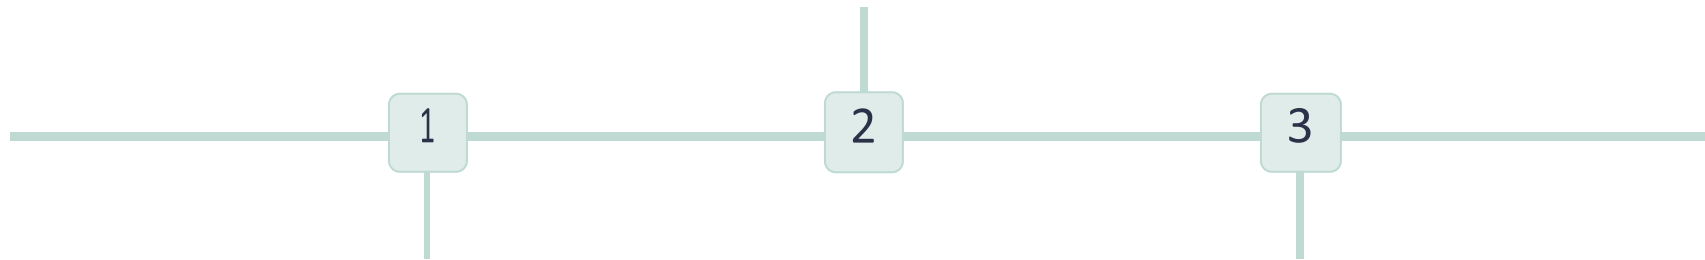

Governments can align with companies and individuals in the initiative to reduce the footprint of carbon and achieve goals global of sustainability.

Benefits of Using Carbon Currency

Most Efficient Market

Creating a more sustainable carbon market

Efficient means that resources are best used and the carbon footprint is reduced across the economy.

Emissions Reduction

The carbon currency system encourages reduction of greenhouse gas emissions greenhouse with its direct benefits to the human health and the environment.

Sustainable Consciousness

The MDSCO² Carbon Currency helps to raise awareness and education about the importance of protecting our planet and create a sustainable future.

Examples of CO² Offset Projects

Reforestation

Projects aimed at planting trees and reforesting areas impacted by human action, such as devastation of the Amazon.

Alternative energy sources

Projects that encourage the use of fonts renewable energy sources, such as wind and solar, in instead of fossil fuels.

Sustainable Agriculture

Projects that support agricultural techniques sustainable ways to reduce CO² emissions and help protect farmland.

Educational Initiatives

Projects that seek to increase the awareness of climate change and promote environmental education.

Impact on the Environment

Reduces greenhouse gas emissions

Decreases the impact of global warming

Encourages the use of energy sources

Protects biodiversity and ecosystems

renewablePromotes sustainability throughout
world

Makes individuals and companies aware of the
importance of the environment

Future of the Use of Currency Carbon

1 Global Expansion

The MDSCO² carbon currency has the potential to become a global solution to reduce the footprint of carbon around the world.

2 New projects sustainable

As the demand for carbon coins increases, more projects sustainability can be funded.

3 More Awareness

The MDSCO² carbon currency and the carbon market in general help to raise awareness of people and companies about the importance of the environment.
